EM EMSL / EMSL T
Sliding Door Operators

www.ementrematic.com
The EM EMSL/EMSL T (Telescopic) sliding door operator combines valuable features and innovations to create optimal function and performance. These operators have earned a reputation for user-friendliness and robust reliability due to low maintenance needs, resulting in a problem-free investment that will function well in a wide variety of climates and traffic needs. The EM EMSL/EMSL T can be integrated as part of the EM Entrematic profile system EMPS and they can also be adapted to a wide range of different doors and customer requirements.

**Easy Installations**
Both EM EMSL/EMSL T are easy to install as a replacement or a new installation. EM Entrematic’s operators are designed with years of engineering know-how to make installation simple, quick and flexible. Although sleek in appearance, these operators are suitable for the heaviest duty applications and are pre-programmed to comply with the customer’s specific requirements for easy installation.

**World-class Safety**
Safety is one of the most vital factors in product development and our operators can be equipped with a variety of sensors providing optimum safety and security. For instance, to permit safe passage between closing doors, the door leaves immediately reverse if an obstruction is detected, then resume at low speed to check whether or not the obstruction has disappeared. If an obstruction is detected between opening door and surrounding walls or interior fittings, the door leaves stop immediately then closes after a time delay. Additionally, the EM EMSL/EMSL T is constructed to meet various authority regulations for emergency escape routes.

**Emergency**
The EM EMSL/EMSL T can either be combined with a mechanical emergency unit that automatically opens the doors – or an electronic emergency unit that automatically opens or closes the doors – in the event of a power failure. The EM EMSL/EMSL T can also be interfaced with fire alarms or smoke detectors.

---

**EM EMSL**
- COW = Clear opening width
- CL = Cover length

**EM EMSL T**
- COW = Clear opening width
- CL = Cover length

**EM EMSL bi-parting**

**EM EMSL single left/right**

**EM EMSL T 4 Teleskop, beidseitig**

**EM EMSL T 4 leaf bi-parting**
- COW = Clear opening width
- CL = Cover length
Models

- EM EMSL bi-parting
- EM EMSL single
- EM EMSL T 4 leaf bi-parting
- EM EMSL T 2 leaf, single

Standard equipment
- Operator including
  - Support beam with transmission
  - Double carriage wheels
  - Electronic control unit with plug-in connections and power supply
  - Partial opening width
  - Synchronizing of two operators

Accessories
- Cover in clear anodized aluminium
- Door adaptor for doors up to 65 mm thickness made by others
- Program selector
- Electronic emergency opening unit
- Mechanical emergency opening unit
- Break-out unit
- Emergency button
- Microwave or IR activators
- Presence detection photocells
- Electromechanical locking devices
- Interlocking between two operators
- Key switch
- EMPS Profile System

Self-monitoring
The microprocessor has an integral self-monitoring device which detects any interference or faulty signals in door operation and takes necessary measures to ensure a safe operation.

Design
The drive unit, control unit, transmission – or optional emergency unit and electromechanical locking device – are all assembled in the support beam. The drive unit transmits movement to the door leaves by means of a tooth belt. The door leaves with integrated or separately mounted door adaptors can be adjusted height-, length- and depth-wise. Journalled steel rollers and sliding track made of high-grade plastic give exceptionally smooth and silent operation.
